

MARTIN PASZKOWSKI

Cloud Infrastructure & Operations Specialist | AWS • Azure • Google Cloud

Stoney Creek, ON • 416-727-4648 • mjptech@yahoo.com • [LinkedIn](#) • [Portfolio](#) • [Live Cloud Dashboard Demo](#)

PROFESSIONAL SUMMARY

Hands-on cloud infrastructure and operations professional with 5 years of concurrent multi-cloud engineering (AWS, Azure, GCP) built and run as the sole IT resource for a small business, on top of 15+ years of broader enterprise IT and technical operations experience. Core strengths: cloud cost optimization and FinOps reporting, containerization (Docker/Kubernetes), infrastructure monitoring, and cloud governance. AWS Certified Solutions Architect - Associate and Google Cloud Associate Cloud Engineer, with a track record of turning cloud spend and utilization data into executive-ready cost reporting.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, IAM, VPC, CloudWatch, CloudTrail, Auto Scaling, Cost Explorer, Budgets); Microsoft Azure (Hybrid Admin, M365, Governance & Compliance); Google Cloud Platform (Compute Engine, GKE, Cloud Storage, IAM, Billing, Cost Management)

Security & Compliance: IAM, ISO 27001, PCI DSS, SOC 2 Type I/II, SIEM (Microsoft Sentinel, Splunk)

Containers & IaC: Docker (image builds, Compose, deployment), Kubernetes (pods, deployments, Helm, Ingress - GKE), Terraform (IaC fundamentals)

Scripting & Tooling: Python (pandas, openpyxl, NumPy), Bash, PowerShell, Java, PHP (intermediate), some Ruby on Rails

Cloud Governance & FinOps: Resource tagging, rightsizing, lifecycle management, cost visibility & reporting, infrastructure cost optimization

Networking & Security: TCP/IP, VPN, VLANs, Firewalls, Routing & Switching

Languages: French (fluent), Polish (native), Spanish & Russian (intermediate)

CERTIFICATIONS

AWS Certified Solutions Architect - Associate • Google Cloud Associate Cloud Engineer (2026) • CompTIA Security+ • CompTIA Network+

Azure Hybrid/Admin/M365 Deployment, Governance & Compliance • Microsoft Sentinel / Blue Team Labs • Terraform, Docker & Kubernetes Fundamentals

PROFESSIONAL EXPERIENCE

Cloud & IT Infrastructure Lead (concurrent with Operations Director) | MJP Services, Mississauga, ON 2010 - 2025

Sole owner-operator of the company's full IT function and multi-cloud infrastructure (AWS, Azure, GCP), run in parallel with operations leadership of the business itself.

- Owned all internal IT operations end-to-end - networking, endpoint administration, Microsoft 365, and multi-cloud infrastructure across AWS, Azure, and GCP - as the company's sole technical resource, with no team or backup to delegate to.
- Deployed and managed containerized workloads on Google Kubernetes Engine (pods, deployments, Helm, Ingress) and Docker (image builds, Compose) to support internal business applications.
- Built Python-based (pandas, openpyxl) cost and operations dashboards, translating multi-cloud resource utilization and spend data into executive-ready reporting.
- Implemented cloud cost optimization practices - resource tagging, rightsizing, lifecycle management - across AWS and GCP environments.
- Created technical process documentation for 20+ IT and cloud operational procedures, cutting new-staff onboarding time by ~40%.
- Reduced compliance incidents to zero over a 5-year period through audit-ready IT documentation and security protocols aligned to ISO 27001 / PCI DSS practices.
- Concurrently led business operations as Operations Director, managing \$2M+ in annual project budgets - applying the same analytical and risk-assessment discipline to infrastructure decisions and vendor/cost management.

Senior Technical Systems Analyst / Engineer | VeriFone Systems Inc., Mississauga, ON 2008 - 2011

L2/L3 support for multi-tier national payment networks and major financial institutions across Canada.

- Reduced average incident resolution time by ~30% by building a structured escalation triage process for firmware, API, and connectivity failures across 5,000+ networked payment terminals.
- Coordinated QA reviews and integration rollouts for 3-5 major software deployments per quarter, cutting deployment errors through standardized pre-release checklists.
- Trained and mentored a 6-person support team on L2/L3 troubleshooting protocols, improving first-call resolution rates across national financial client accounts.
- Maintained secure, stable operations across payment network infrastructure serving 10+ major financial institutions, ensuring 99%+ uptime on critical transaction systems.

Earlier IT Career (2000 - 2008)

- Moneris Solutions Corp. - Integration Specialist & Technical Customer Service Lead (2004-2008)
- Bank of Montreal Nesbitt Burns - Network & Systems Support Analyst (2002-2004)
- EDS Canada / Sprint Canada - Server & Desktop Support Analyst (2000-2002)

SELF-DIRECTED CLOUD PROJECTS

Independent builds developed outside of employer infrastructure to deepen hands-on, production-pattern experience with AWS, GCP, and Azure tooling:

- Cloud Cost Optimization Dashboard (AWS & GCP): Python (pandas) solution ingesting AWS Cost & Usage Reports and Google Cloud Billing exports to surface idle resources, rightsizing opportunities, and monthly cost trends across a mixed test/production footprint (20-30 compute instances, 10-15 S3 buckets plus EBS/EFS volumes), identifying an average of ~\$500/month in optimizable spend, with spikes to ~\$1,500/month during heavier test cycles.
- AWS Infrastructure Deployment: Designed and deployed secure environments (EC2, S3, EBS, EFS at the scale above) using IAM, VPC, CloudWatch, CloudTrail, applying least-privilege IAM policies and documenting architecture decisions; used Amazon Glacier for low-cost, long-term archival of infrequently accessed data as part of storage lifecycle and cost management.
- Cloud Monitoring & Security: Configured Microsoft Sentinel and Splunk for centralized log analysis, event investigation, and operational dashboards.
- Containerized Application Deployment: Built and deployed Docker containers and Kubernetes workloads on GKE, including Helm charts and Ingress configuration.
- Cloud Resource Monitoring Dashboard (React): Real-time observability UI visualizing infrastructure performance telemetry, modeled on AWS CloudWatch metric structure, with latency alerting and trend charts - live and accessible now at cloud-dashboard-topaz.vercel.app for direct evaluation.

EDUCATION

Cloud IT Specialist Diploma - Canadian Business College (completed July 2026)

CCNA Certificate - Humber College (2012)

B.Sc. Computer Science - Toronto Metropolitan University (formerly Ryerson University) (1996)
